## SUMMARY

---

Full-Stack Software Engineer with experience building scalable web applications, APIs, and real-time systems using Laravel, Vue.js, and modern web technologies. Experienced in designing production-ready architectures, managing deployments, and collaborating across teams to deliver reliable systems.

## SKILLS

---

Docker, CI/ CD pipelines, Backend Development: Laravel, Node.js, RESTful API Design, Webhook Architectures, Real-Time Systems, Frontend Development: Vue.js, Next.js, JavaScript (ES6+), Responsive UI Systems, Databases & Optimization: PostgreSQL, MySQL, Database Design, Query Optimization, DevOps & Infrastructure: Linux Server Administration, Nginx, Caddy, PM2, Docker, CI/CD Deployment Pipelines, Cloud & Concepts: Cloud Platforms (AWS / GCP architecture concepts), Scalable System Architecture, Third-Party Integrations, AI & Data Exposure: AI/ML Service Integration, Data-Driven Applications, Model Deployment Concepts

## WORK EXPERIENCE

---

### Doing Platform

Mar 2023 - Present

Full-Stack Developer / Project Management

- Designed and implemented scalable full-stack systems handling real-time data and high user interaction.
- Built and maintained RESTful APIs powering web and mobile applications.
- Managed production deployments, server infrastructure, and release workflows.
- Integrated third-party services (payments, messaging, webhooks) into scalable backend systems.
- Led development workflows, code reviews, and sprint planning in Agile environment.
- Mentored junior developers and reviewed code to ensure high code quality, optimal performance, and adherence to industry best practices.

## PROJECTS

---

### Doing

- Contributed to the development of a scalable e-commerce platform.
- Developed dynamic frontend components and built and maintained backend features.
- Integrated payment systems and order management workflows.
- Optimized database queries and improved overall system performance.

On-Demand Delivery Platform

- Designed and developed a scalable delivery platform architecture including admin dashboards and mobile apps, supporting real-time order tracking and system integrations.
- Designed systems that can be extended to support AI-driven decision-making and automation workflows.
- Designed and developed a platform enabling third-party delivery services to integrate via webhooks.
- Built a full onboarding system for delivery providers (registration, API setup, and configuration).
- Implemented a review and approval workflow to validate integrations before publishing.
- Developed secure and scalable webhook handling for order dispatching and status updates.
- Integrated the system within a larger platform to allow stores to connect with approved delivery providers.

Webhook-Based Delivery Integration Platform

- Active GitHub portfolio with projects demonstrating API design, integrations, and system architecture.

## EDUCATION

---

Bachelor's Degree in Computer Science

Jan 2020 - Jan 2023
